

Dear Colleague,

There is an open position for a PhD student in our Department, granted by the Spanish Ministry in charge of Education and Research.

The successful candidates would work on the experimental development of time-and space-controlled single photon emitters and entangled-photon pairs, based in semiconductor nanostructures.

Candidates should have a master degree in Physics or Electronic Engineering with good to very good average graduate ratings.

The PhD contract is for 4 years with a yearly salary of 20,500 € before taxes.

As the application procedure is a bit cumbersome (see attached document, unfortunately only available in Spanish) and the deadline is June 29<sup>th</sup> (!), the interested candidates should contact one of us in the next days:

[jose.calleja@uam.es](mailto:jose.calleja@uam.es)

[lazic.snezana@uam.es](mailto:lazic.snezana@uam.es)

[herko.vandermeulen@uam.es](mailto:herko.vandermeulen@uam.es)

I would be very grateful if you can spread this information in your influence area.

With my best regards,

J.M. Calleja
